

COMPANY PROFILE

NexGen Build

Complete Construction & Fabrication for Saudi Arabia. End-to-end solutions from foundation to finish.

Dammam & Jubail Eastern Province, KSA +966 534 169 741 contact@nxgens.com

2026

OUR STORY

How NexGen Build Began

We're a Saudi Aramco-approved construction and fabrication company delivering end-to-end solutions across six integrated service divisions.

NexGen Build was founded on a simple principle: construction and fabrication projects fail when multiple contractors don't communicate effectively. We saw this problem repeatedly across industrial and commercial projects in Saudi Arabia.

Our founders—engineers and project managers with decades of combined experience—built an integrated company with six specialized divisions under one roof. This approach eliminates coordination delays, ensures design compatibility, and gives clients a single point of accountability.

Our approval as Saudi Aramco vendor #10119021 validates our commitment to quality, safety, and compliance across the Eastern Province.

FOUNDED
Established in Dammam
Integrated construction solutions for Saudi Arabia.

EXPANSION
Industrial & Workshop Capabilities
CNC laser, machining, and metal works for oil & gas and construction clients.

SAUDI ARAMCO
Vendor #10119021
Approved supplier registration (March 30, 2026).

SAUDI ENERGY
SAP Ariba Supplier
Registered for national energy sector procurement.

PURPOSE

Mission & Commitment

We deliver integrated construction and fabrication solutions that build the Kingdom's infrastructure reliably, safely, and sustainably.

One company. One team. One point of accountability.

Integrated Delivery

Six specialized divisions under one roof—civil, MEP, and industrial fabrication—coordinated as a single project team.

Certified Standards

Saudi Aramco vendor approval, ISO 9001:2015, AWS welding certifications, and ASME-aligned procedures.

Safety Culture

Strict site protocols, continuous training, and non-negotiable compliance on every job.

6	2	150+	98%

CULTURE

Principles That Guide Us

Six values shape how we plan, execute, and stand behind every project.

Excellence in Execution

We don't deliver "good enough." Every project reflects our commitment to exceeding specifications—backed by micron-level CNC accuracy and weld rejection below 1% in our workshop operations.

Safety First, Always

No project is worth risking lives. We implement strict safety protocols on every site, train continuously, and treat compliance as non-negotiable.

Integrated Accountability

One company. One team. No finger-pointing between contractors. You work with us; we coordinate internally and own the results.

Transparent Communication

Regular updates, clear expectations, and prompt answers. You always know project status and challenges before they become problems.

Continuous Improvement

We invest in training, modern equipment, and new

Sustainable Solutions

Energy-efficient HVAC, water-saving plumbing,

TRUST

Credentials & Approvals

Approvals and systems that meet the Kingdom's most demanding procurement and quality standards.

Saudi Aramco Approved Vendor

Vendor #10119021

We meet Saudi Aramco's rigorous technical and compliance standards—the Kingdom's most demanding supplier approval.

Saudi Energy Registered

SAP Ariba certified supplier

Approved for national energy sector projects and government procurement pathways.

ISO 9001:2015 Certified

Quality Management Systems

Documented processes, quality control, and continuous improvement across all operations.

AWS Certified Welding

AWS D1.1 & D1.4 · ASME Section IX

Active welder certifications with rigorous procedures and NDT-backed quality protocols.

Vision 2030 Alignment

Kingdom infrastructure standards

Services aligned with Saudi Arabia's diversification and infrastructure modernization initiatives.

Fiber Laser & CNC Equipped

Dammam & Jubail facilities

State-of-the-art fabrication equipment with micron-level precision in two strategic locations.

SERVICE 01 / 06

General Construction

Complete structural delivery—from site preparation through handover. One contractor accountable for the entire build.

- Site survey, soil assessment, construction planning, and safety protocols
- Excavation, reinforced foundations, concrete, and structural steel (in-house fab & erection)
- Roof, wall, and floor systems; facade, cladding, and building envelope closure
- Interior finishing, demobilization, and full handover documentation

1. **Coordinated Design**
   Direct planning with electrical, HVAC, and plumbing prevents clashes during framing.
2. **In-House Steel Fabrication**
   Structural steel from our Dammam & Jubail shops—no middleman delays.
3. **Single Accountability**
   We own the civil, structural, and finishing scope end to end.

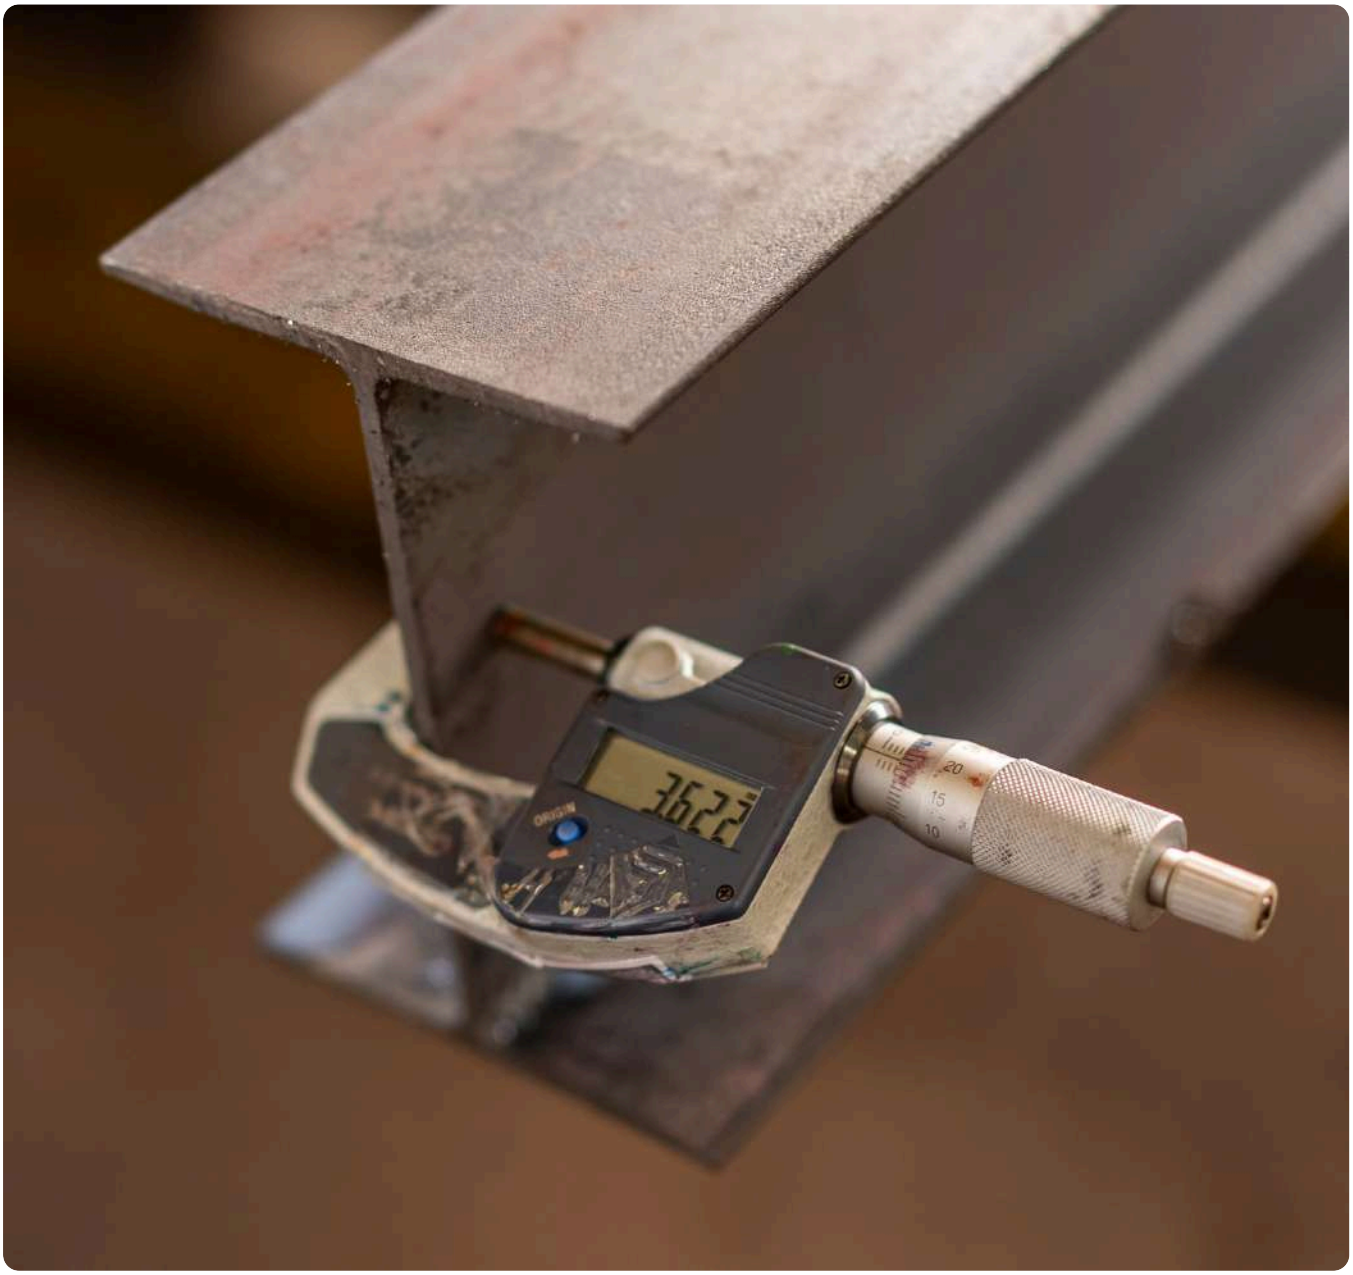

SERVICE 02 / 06

Electrical Systems

Design, install, test, and maintain complete electrical systems—from load calculations through certification.

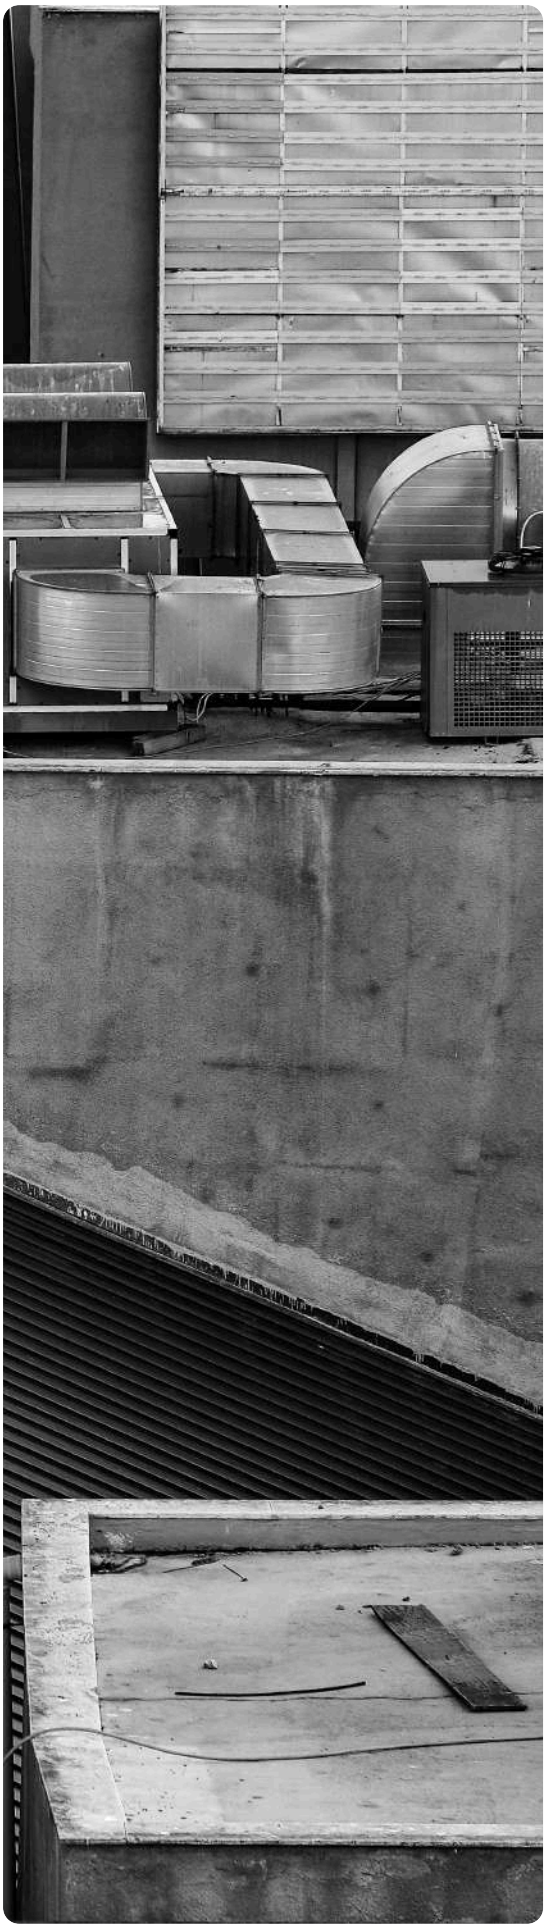

- Load analysis, distribution layout, main & sub panels, LED and emergency lighting
- Backup power: generators, UPS, and automatic transfer switches (ATS)
- Switchboards, wiring, grounding, surge protection, and SBC 401 compliance
- Insulation, earth continuity, load testing, and as-built drawings

1. **SBC Code Compliance**
   Designs adhere to Saudi Building Code (SBC 401) for safe clearances and approvals.
2. **Backup Power Security**
   ATS, generators, and UPS protect critical operations during outages.
3. **Energy Optimization**
   Power factor, LED controls, and efficient panel design lower utility costs.

SERVICE 03 / 06

HVAC Systems

Climate control engineered for Saudi Arabia's extreme heat—central AC, VRF, and advanced controls for comfort and efficiency.

- Thermal load calculations and equipment selection for ~50°C peak conditions
- In-house custom sheet metal duct fabrication and installation
- Refrigerant lines, condensate systems, BMS thermostats, and airflow balancing
- SBC 501 compliance, startup, leak testing, and quarterly maintenance programs

1. **Built for 50°C Peaks**
   Systems engineered for Gulf summer peaks without efficiency collapse.
2. **25–35% Utility Savings**
   High-efficiency compressors and demand-controlled dampers cut power use.
3. **In-House Duct Fabrication**
   Custom ducts from our shops—faster installs and better seals.

Typical Applications

Commercial towers, industrial workshops, control rooms, and oil & gas facilities across the Eastern Province—sized for continuous high-ambient operation.

SERVICE 04 / 06

Sanitary & Plumbing

Complete water infrastructure—reliable supply and safe wastewater removal for commercial and industrial buildings.

- Demand calculations, pipe sizing, gravity drainage, and vent stack design
- Hot/cold distribution (copper, PEX, PPR), fixtures, heaters, and grease traps
- Hydrostatic testing, DWV flow checks, and backflow preventer verification
- SBC 701 compliance, preventive maintenance, and emergency leak response

1. **Zero Leak Focus**
   Hydrostatic testing before walls close catches faults early.
2. **Water-Saving Designs**
   Efficient fixtures and optional greywater strategies lower consumption.
3. **Odor & Blockage Prevention**
   Properly engineered vents maintain trap seals and sewer pressures.

SERVICE 05 / 06

Waterproofing & Coatings

Long-term structural protection for foundations, roofs, wet areas, tanks, and specialized applications.

- Moisture mapping, substrate profiling, and membrane system selection
- Bituminous sheets, liquid polyurethane, TPO/PVC, and crystalline coatings
- Crack repair, joint sealants, flashing, and penetration detailing
- Flood testing, holiday scanning, and 10–15 year performance warranties

1. **Prevent Structural Damage**
   Membranes stop moisture that corrodes rebar and weakens concrete.
2. **Mold & Algae Protection**
   Dry substrates prevent mold growth and coating failure in wet zones.
3. **Documented Warranties**
   Structured 10–15 year warranties backed by premium systems.

Where We Apply It

Foundations, basements, podium decks, roofs, wet rooms, water tanks, and industrial process areas—specified for Saudi climate and local Civil Defense expectations.

SERVICE 06 / 06

Fire Protection

Complete life-safety systems that meet Saudi Building Code and Civil Defense requirements.

- SBC 801 review, hazard classification, and sprinkler system engineering
- Detection & alarms, hydrants, hose reels, and standpipe networks
- Clean-agent suppression (FM200 / CO_2) and fire pump sizing
- Hydrostatic tests, flow verification, BMS interfaces, and Civil Defense certification

1. **Code-Ready Designs**
   Engineered to SBC 801 and Civil Defense expectations from day one.
2. **Full System Scope**
   Sprinklers, detection, alarms, pumps, and clean-agent options in one team.
3. **Ongoing Compliance**
   Annual testing, quarterly inspections, and emergency repair support.

WORKSHOP CAPABILITY

CNC Fiber Laser Cutting

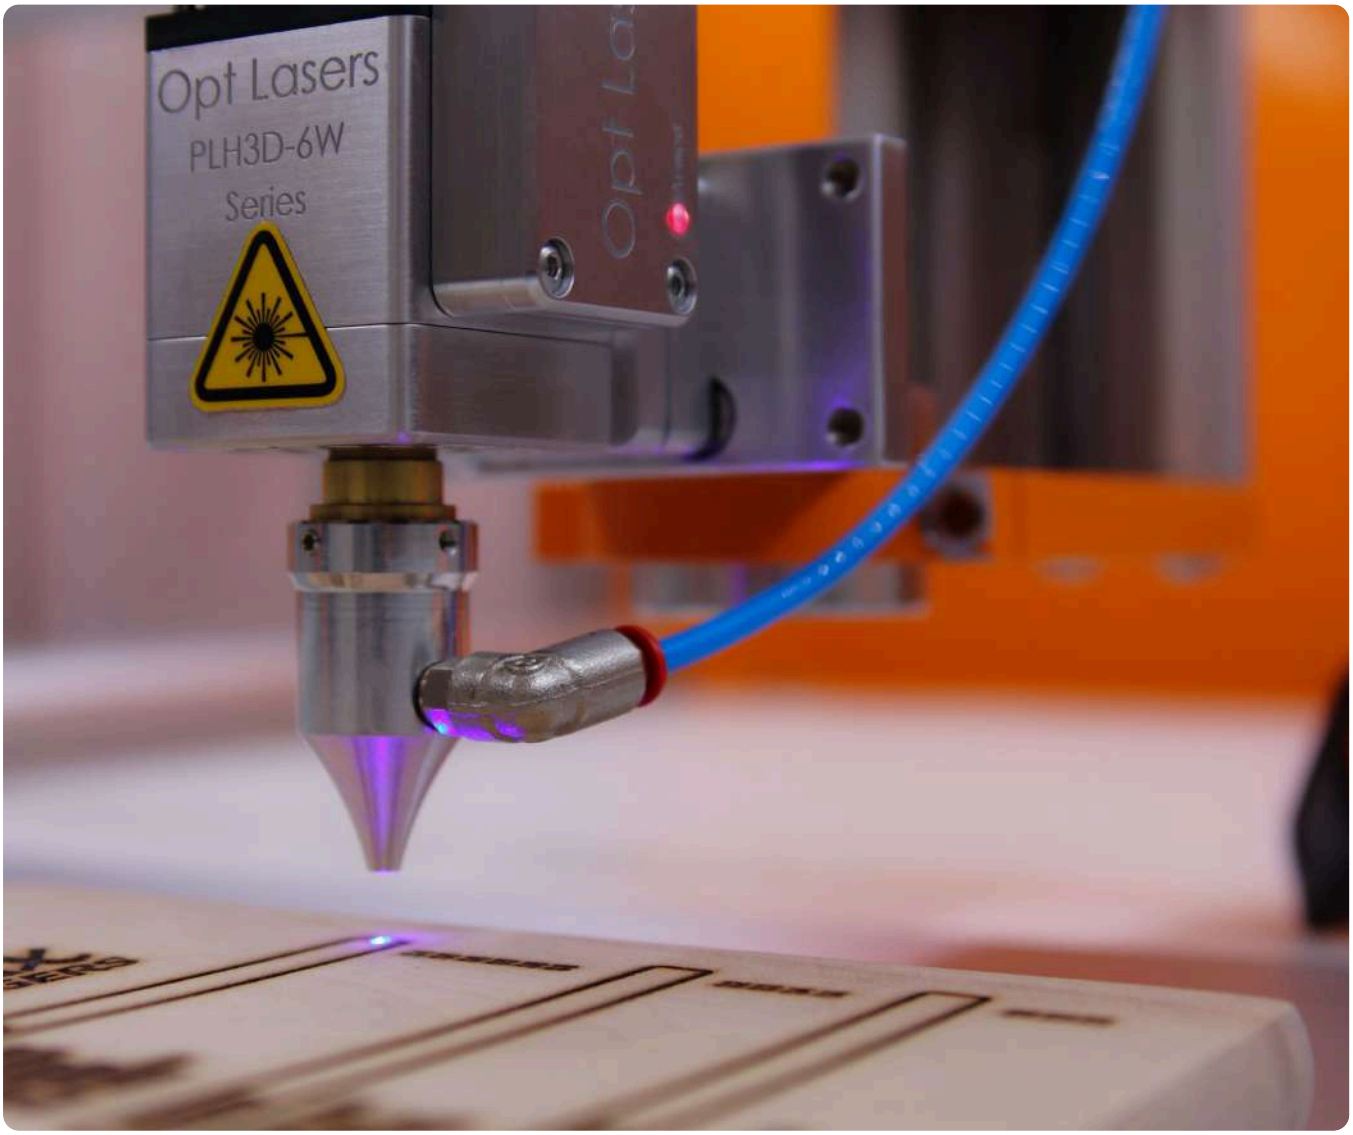

High-precision metal cutting with fiber laser technology—±0.05 mm accuracy for industrial and architectural components.

±0.05mm
Cutting Accuracy

3×1.5m
Bed Area

- Mild steel to 25 mm, stainless to 20 mm, aluminum to 15 mm
- Precision components, architectural screens, enclosures, and nesting for minimal waste
- Engraving and permanent part marking for traceability
- Typical lead time 2–5 days; emergency dispatch available

Material	Thickness	Lead Time
Mild Steel	0.5–25 mm	2–3 days
Stainless Steel	0.5–20 mm	3–4 days
Aluminum	0.5–15 mm	2–3 days

WORKSHOP CAPABILITY

CNC & Manual Machining

Precision components from metal stock using CNC centers and skilled manual machinists—tight tolerances for oil & gas and industrial use.

±0.03mm	3 / 5
High-Precision Tolerance	Axis CNC Options

- CNC milling: pockets, slots, housings, and complex 3D features
- CNC turning: shafts, flanges, bushings, and custom threaded fittings
- 5-axis simultaneous machining for intricate single-setup parts
- Manual rework for emergency repairs and custom modifications

1. **Surface Finish**
   Typical Ra 0.8–3.2 µm for critical mating surfaces.
2. **Material Range**
   Mild steel, stainless, aluminum, brass, cast iron, and specialty alloys.
3. **Inspection Ready**
   Dimensional checks and documentation for oil & gas and industrial QC packages.

Shop Support

Emergency one-off parts and reverse-engineered replacements—machined in Dammam or Jubail and delivered to site with short lead times.

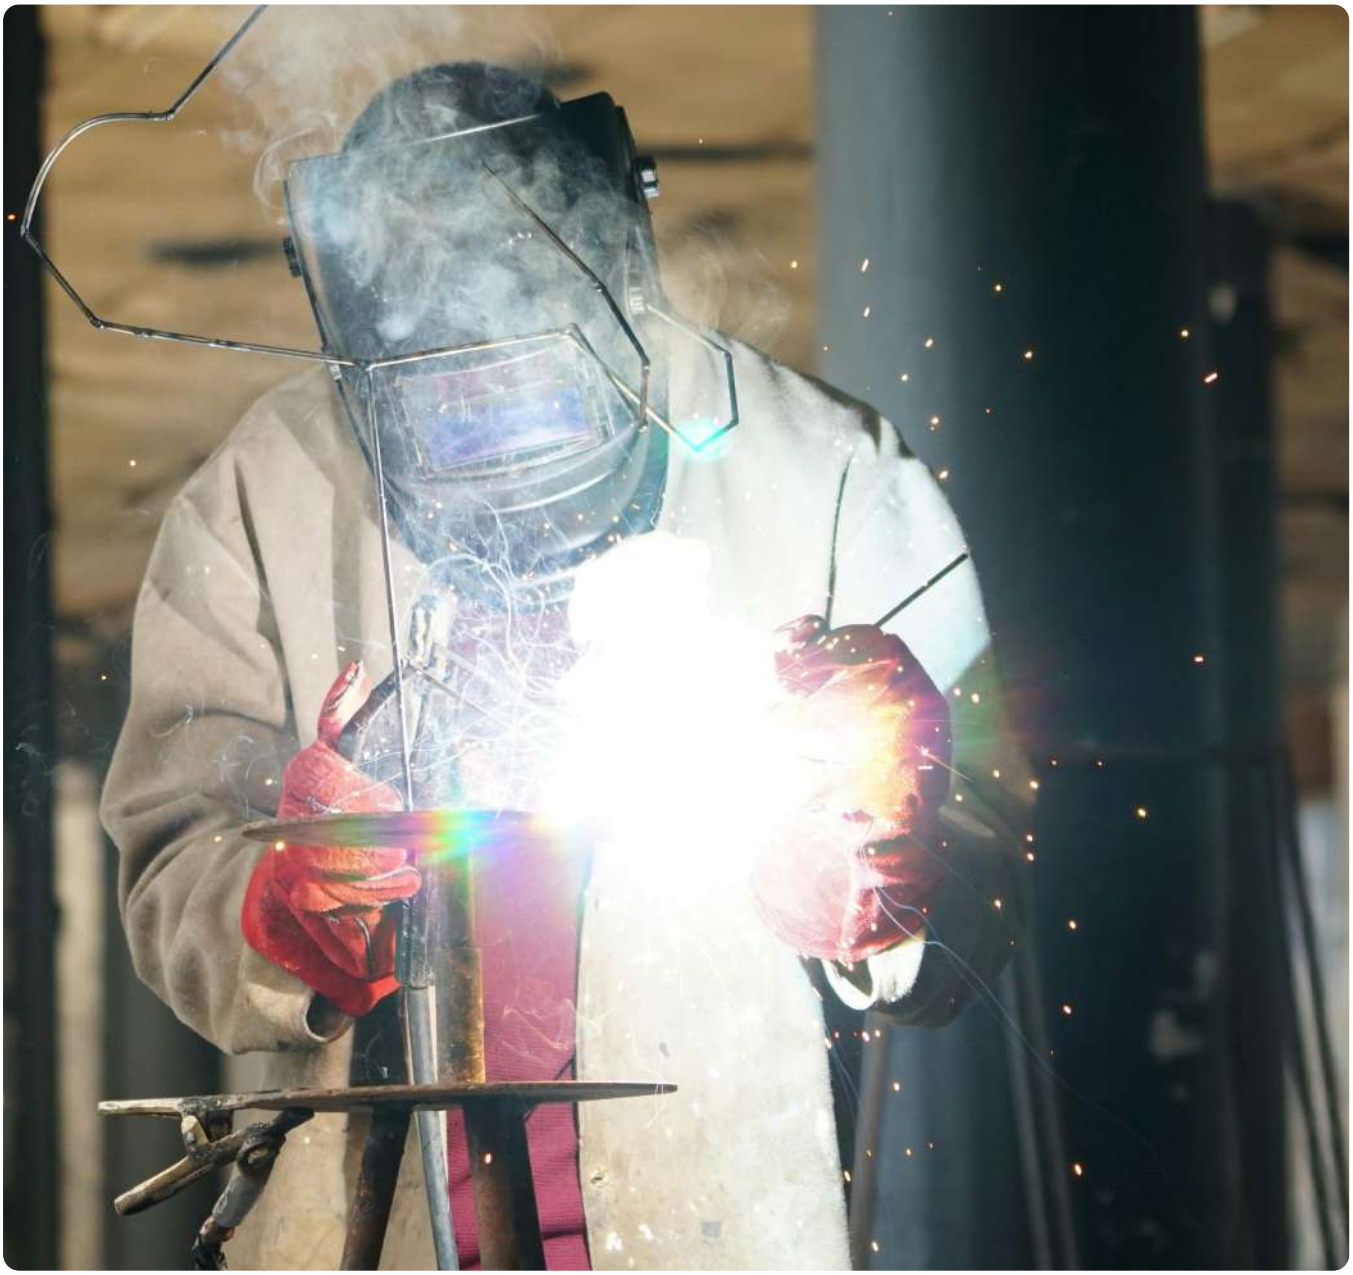

WORKSHOP CAPABILITY

AWS Certified Welding

Structural and pressure welding with AWS-qualified welders and ASME Section IX procedures—rejection rates below 1%.

- Processes: FCAW, SMAW, GTAW, GMAW (+ SAW at Jubail)
- Certifications: AWS D1.1 (structural) & D1.4 (piping)
- Pipe diameters from ½" to 48"; carbon, stainless, duplex, aluminum
- NDT support: visual, RT, UT, MPI with WPS at every station

1. **First-Time Pass Focus**
   Documented procedures and welder quals keep rejection below 1%.
2. **Shop + Field**
   Fabrication welding in-house and certified field welding on site.
3. **Audit-Ready Records**
   Qualification logs, WPS sheets, and third-party NDT matching.

WORKSHOP CAPABILITY

Online Leak Repair

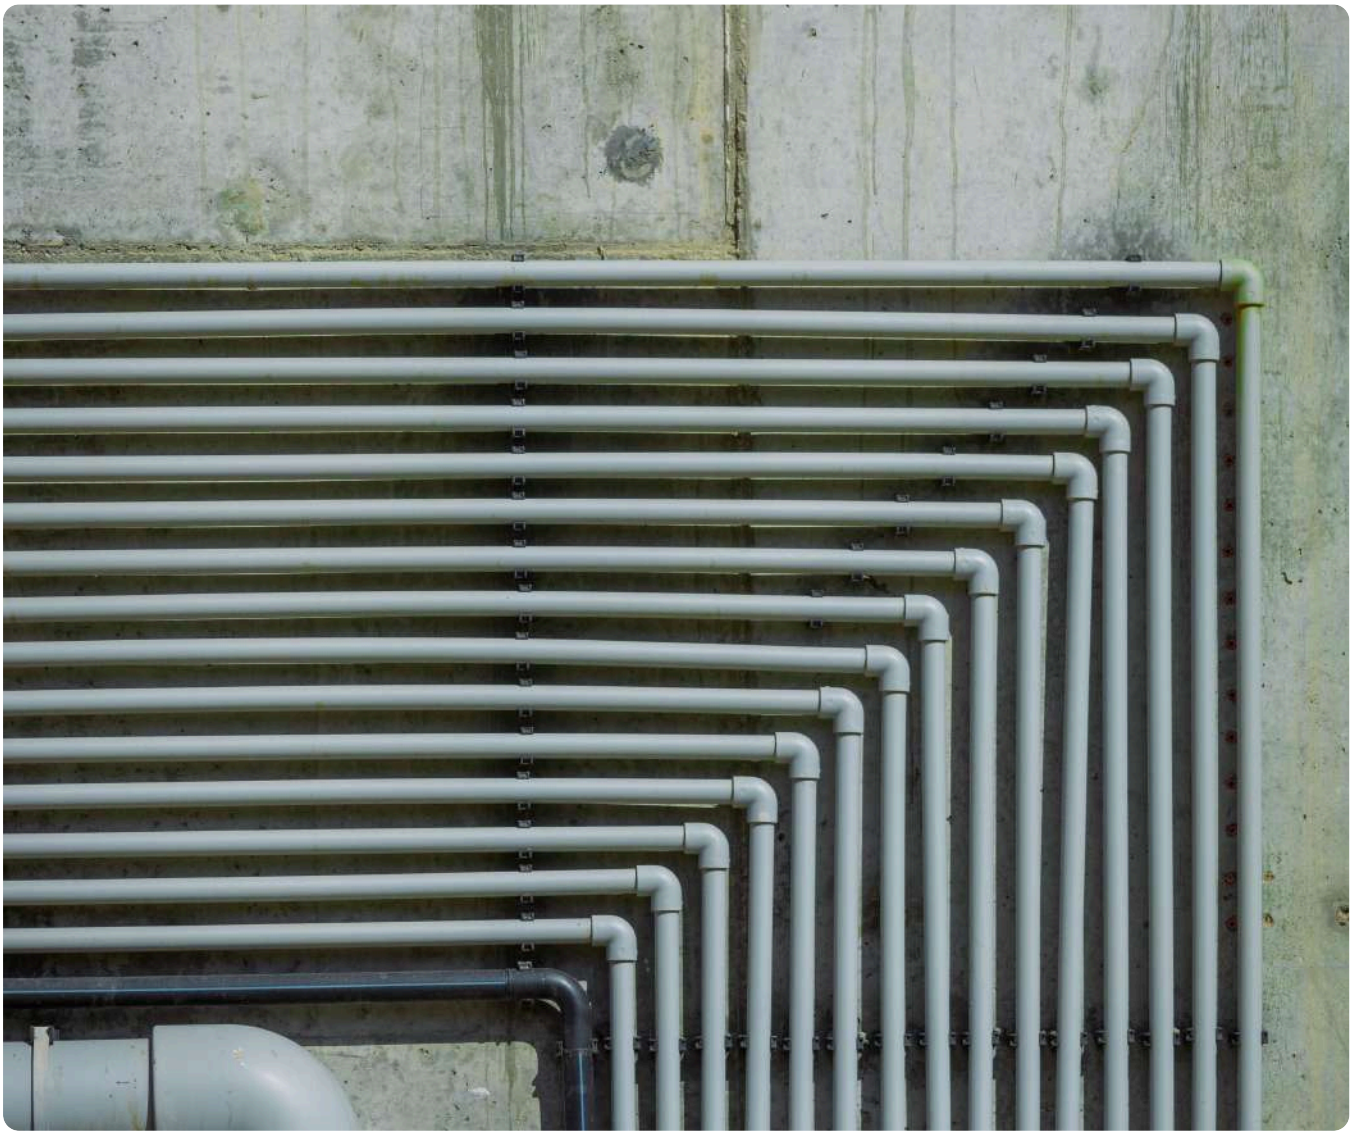

Seal leaks on live equipment with custom clamps—zero process downtime and 24/7 emergency dispatch.

1–2 hr
On-Site Response

600 psi
Clamp Rating

- Pipe leak enclosures, flange joint clamps, valve gland sealing
- Custom clamps fabricated in Dammam/Jubail within 1–4 hours
- Sizes ½"–48"; ASME Section VIII clamp design formulas
- Pressurized sealant injection and final leak-free signoff

Factor	Online Repair	Shutdown Repair
Downtime	0 hours	4–24+ hours
Production	Continues	Stopped
Clamp prep	1–4 hours in-house	Pipe replacement sourcing

WORKSHOP CAPABILITY

Industrial Equipment Maintenance

Keep critical plant assets running—pumps, boilers, exchangers, generators—with predictive diagnostics and rapid response.

- Preventive and corrective maintenance programs for rotating & static equipment
- Vibration analysis, thermal imaging, and oil condition monitoring
- Overhaul, alignment, seal replacement, and dynamic commissioning
- 1-hour dispatch / 2-hour on-site target in Dammam and Jubail

1. **Predictive Insight**
   Condition monitoring catches failures before unplanned shutdowns.
2. **24/7 Industrial Support**
   On-call technicians for critical facility emergencies.
3. **Workshop Backup**
   Machining and welding shops ready for custom parts and repairs.

Assets We Cover

Pumps, compressors, heat exchangers, boilers, generators, conveyors, and process skids—supported with planned PM schedules or emergency call-outs.

Response Model

Local dispatch from Dammam and Jubail with workshop machining and welding standing by for custom parts when field repair needs shop support.

4,000 M² · DAMMAM

Fabrication Shop

In-house fabrication for structural steel, ASME piping, vessels, and sheet metal—built for oil & gas and industrial delivery standards.

Structural Steel

Columns, platforms, crane girders, frames, and connection assemblies fabricated and QC'd in-house.

ASME Piping Spools

Process and utility spools to ASME B31.1 / B31.3 with weld maps and NDT documentation.

Tanks & Vessels

Industrial tanks, pressure vessels, silos, and process columns with traceable materials.

Sheet Metal & Ductwork

HVAC ducts, hoppers, enclosures, and partitions from our sheet metal capability.

Serving Dammam, Jubail, Al Khobar, and Ras Tanura with logistics built for industrial site delivery. Typical custom fab turnaround: 5–7 business days.

LOCATIONS

Dammam & Jubail

Two fully equipped industrial workshops across the Eastern Province—precision manufacturing, welding, and specialized repair under one company.

Dammam Workshop

Dallah Industrial Area, Dammam

CNC fiber laser, machining, welding, and our 4,000 m^2 fabrication shop. Primary hub for structural steel, piping spools, and custom fabrication.

Jubail Workshop

Jubail Industrial Area / Industrial City

Online leak repair, machining, welding (incl. SAW), and rapid industrial response for petrochemical and energy clients.

DIFFERENTIATORS

Why Choose NexGen — I

What sets us apart in Saudi Arabia's construction and industrial fabrication market.

01
Integrated Accountability

Six divisions under one roof eliminate subcontractor finger-pointing. Design compatibility and schedule ownership stay with a single team.

02
Dual Workshop Footprint

Dammam and Jubail facilities put laser cutting, CNC, welding, and leak repair close to Eastern Province industrial sites.

03
Safety First Culture

Strict protocols, continuous training, and 1,000,000+ safe man-hours. Safety compliance is non-negotiable on every job.

04
Certified Welding Excellence

AWS D1.1 & D1.4 welders, ASME Section IX procedures, and weld rejection below 1% with full NDT documentation.

DIFFERENTIATORS

Why Choose NexGen — II

Quality systems, responsiveness, and alignment with the Kingdom's infrastructure agenda.

05
Quality Systems

ISO 9001:2015 processes, Saudi Aramco vendor #10119021, and Saudi Energy SAP Ariba registration for demanding procurement.

06
Reliable Turnaround

98% on-time delivery, quotes in 2–3 business days, and custom fab typically in 5–7 business days.

07
Emergency Response

24/7 industrial support with 1-hour dispatch and 1–2 hour on-site response for critical leaks and equipment failures.

08
Vision 2030 Alignment

Infrastructure, energy, and industrial capability that support the Kingdom's diversification and modernization goals.

OUR PEOPLE

Leadership Team

Proven expertise, professional certifications, and a commitment to excellence on every project.

Eng. Hamad Zaman
FOUNDER & MANAGING DIRECTOR

20+ years of construction and industrial project management in Saudi Arabia. Recognized for driving structural execution and client-focused engineering solutions.

Eng. Tariq Al-Ghamdi
OPERATIONS MANAGER

15+ years managing integrated civil and industrial fabrication sites. Specialized in workflow efficiency, AWS welding compliance, and safety auditing.

Eng. Sarah Al-Dosari
TECHNICAL DIRECTOR

12+ years leading structural design, mechanical systems integration, and international engineering standards compliance for Saudi infrastructure projects.

Huzaifa Zaman
SALES EXECUTIVE

Primary commercial contact for inquiries and project scoping. Reach us at contact@nxgens.com or +966 534 169 741.

One Accountable Team

Leadership spans construction, workshop operations, technical design, and commercial delivery—so clients have clear ownership from bid to handover.

Eastern Province Focus

Hands-on experience across Dammam, Jubail, and industrial sites serving oil & gas, energy, and commercial infrastructure projects.

Let's Build Together

Integrated construction and industrial fabrication solutions for Saudi Arabia's critical infrastructure.
